Now in AppleScript, you can 'tell' applications which keys are pressed. This gives us the great opportunity to create Macro's for each and every program that we want. Like Illustrator for example: you are able to change the artboard size without using your mouse, just press Shift+O to select the artboard size tool, and press Enter to open a dialog.

## **Use Applescript to change the artboard size in Illustrator ...**

Setting the resolution is a piece of cake but when I change the ruler unit to Centimeters, it shows the screen about 36x27cm which is not right (iPad screen is 24.3x19cm). Illustrator calculates these lengths based on the DPI. But when creating a new document the only available DPI's are: 72, 150, 300 (File > New > Raster Effect).

## **Solved: How can I set DPI for a document in illustrator ...**
