Light []. Light is that range of electromagnetic energy that is visible to the human eye, the visible colors. The optical radiation includes not only the visible range, but a broader range of invisible electromagnetic radiation that could be influenced in its radiation behavior in a similar way as the visible radiation, but needs often other transmitters or receivers for this radiation.

The single light source is located at S 0, and the light goes through two very narrow openings at S 1 and S 2. (A single light source is necessary because the light waves must have identical frequency and phase. The light beam is also considered to be of one color.)

Most visible objects are seen by reflected light. There are few natural sources of light, such as the sun, stars, and a flame; other sources are man-made, such as electric lights. For an object to be visible, light from a source is reflected off the object into our eyes (except in the special case of phosphors).

The main long-term goals of our theoretical research group are to understand and control large interacting quantum systems, as well as to design and create new ones. To achieve these goals, we integrate tools and methods from quantum optics, atomic and molecular physics, condensed matter physics, and quantum information science. Some specific goals of our research program are to Develop ...
