database are: Indexes Indexes allow quick lookup of information.

Conceptually, an index in a database is like an index in a book. In a book, the index relates each indexed term to the page or pages on which that word appears.

Review 2 Documents

The fundamental unit of data storage in SQL Server is the page. The disk space allocated to a data file (.mdf or .ndf) in a database is logically divided into pages numbered contiguously from 0 to n. Disk I/O operations are performed at the page level. That is, SQL Server reads or writes whole data pages.

and NoSQL databases have different strengths and weaknesses: In RDBMS,

data can be queried flexibly, but queries are relatively expensive and don't scale well in high-traffic situations (see First Steps for Modeling Relational Data in DynamoDB).

Document databases were originally designed so store documents. If you use them for other data, you are not going to get the best performance/usage just the same as if you store documents in a relational databases. This happens a lot. People store relational data in document databases and then complain how bad
